Mastering Risk and Compliance

Optimize your Security Program, Automate Compliance and Reduce your IT with our Services.

Identify risks to your IT and information security and develop IT governance and compliance structures that are reliable and sustainable. We can help you successfully control the measures you need, from information security management systems (ISMS), and data protection to IT governance, risk and compliance management. You can focus on your core business, while benefiting from the extensive experience and in-depth knowledge of our experts.

OUR RISK AND COMPLIANCE SERVICES

BUSINESS CONTINUITY MANAGEMENT. Our experts can assist you throughout the process, from consultation to the actual implementation of your BCMS.

DATA PRIVACY. Analyze processes to guide you to implement company-wide control and privacy management to protect personal data from misuse.

GOVERNANCE & STRATEGY. Guidance that ensures your organization has the management decision platform in place to manage IT and information security risks.

INFORMATION SECURITY MANAGEMENT SYSTEM. Optimize your organization's compliance efforts with leading-edge frameworks from gap analysis to the design and implementation of ISMS.

RISK & COMPLIANCE MANAGEMENT. From IT risk maturity and prioritization to GRC configuration and enablement, our extensive line of proven risk and compliance management solutions will help you assess your IT risks.

Advanced Cyber Defenses

Knowledge Empowers Actions to Protect your Digital Assets.

Our services in the field of advanced cyber defenses help you protect your organization effectively from cyberattacks and unauthorized access to your data. You also benefit from our experts' broad knowledge and expertise whether you need network security, IoT security, identity and access management, penetration tests or other IT security services, we provide advice and find the ideal solution for your company.

OUR ADVANCED CYBER DEFENSE SERVICES

APPLICATION SECURITY. Penetration testing and assessment services identify common attack points in your applications and environments.

DATA PROTECTION. Ensures your organizations' data are protected, grows and maintains capabilities from data identification, ownership, protected sharing, governance and protection in transit.

ENDPOINT SECURITY. Helps organizations gain control over mixed endpoint environments, while supporting enterprise mobility management systems.

IDENTITY AND ACCESS MANAGEMENT (IAM). Helps customers to establish a secure authentication and authorization with profiling and scoring of identities in user centric models.

INCIDENT RESPONSE. Gives organizations the ability to react and manage security incidents from inception to conclusion.

IoT SECURITY. Assist your organization by implementing device-specific risk management, assessment processes and IoT analytics and testing.

NETWORK SECURITY. Support customers to protect organizations from next generation cyber attacks.

OT SECURITY. Build industrial systems that are both safe and secure and can adapt to the demands of industry 4.0.

SECURITY ANALYTICS AND DETECTION. Leverage advanced analytics and threat intelligence to reduce the time to detect a cybersecurity incident within your environment.

Secure Cloud Enablement

Protect your Business and Multi-Cloud Environment with a Holistic Cloud Security Approach

There are many advantages for your company if you adopt a cloud service. Providing data quickly and in any location, will make your IT more efficient and help save money. However, cloud services also pose risks, and you will face new challenges when implementing central security standards and established measures. We can help you plan and implement a secure cloud solution. Benefit from the expertise of our IT experts.

OUR CLOUD ENABLEMENT SERVICES

CLOUD SECURITY. Educate your team on leading cloud security practices to help your organization better manage risk across all environments. We support your organization to improve areas of risk such as server hygiene, secure communications while optimizing your security policy and posture.

ENTERPRISE CLOUD TRANSFORMATION. Simplify challenges by securely integrating existing IT systems with cloud services. We provide improved security controls by designing and implementing secure networks, improving identity management and utilizing cloud automation to remove inconsistencies in operations.

HYBRID INFRASTRUCTURE. Optimize and accelerate your ability to provide services to customers. We ensure that your organization is equipped to seamlessly manage IT regardless of service location (private or cloud). We can assist your company to improve cost efficiency by utilizing the latest cloud services to provide business continuity and disaster recovery.

About TUV Rheinland OpenSky

At TUV Rheinland OpenSky, we build secure and safe digital solutions. We offer consulting, systems integration, testing, certification and managed security services to protect today's digital enterprise. Our holistic framework addresses Cybersecurity, Privacy, Cloud Infrastructure, IoT, and Functional Safety requirements to build trusted connected platforms.

TUV Rheinland OpenSky is a wholly owned subsidiary of TÜV Rheinland Group, a testing and certification leader who has created a safer world for over 140 years. We keep our clients at the global forefront of interoperability, performance and safety.
